Proven Approaches
Technology Expertise

eHealthPartners, based in Atlanta, Georgia, is a leading information technology services company serving health plans and insurance companies nationwide. We provide our customers a broad array of business, technical and compliance consulting services focused on the industry's leading technologies and application software.

Our Enterprise Services consulting group is uniquely qualified to assist your organization in two key areas.

Business Intelligence, Data Warehouses & Reporting Services

What is your company's vision for DW/BI? Does your organization fully understand the impact improved access to information can have on your bottom line? To get ahead of the curve, you need to know where the opportunities lie and how to most effectively deploy the information.

Effective decision making relies not on simply capturing massive amounts of generic data but also on capturing the right quality data for your business organizations. eHealthPartners can help you identify high impact data and transform the data into actionable information easily and quickly available to key business users. We provide the necessary DW/BI specific implementation framework and methodologies to assist you with strategically managing your information, building data warehouses, upgrading your databases, consolidating database platforms and developing dashboards and reports.

Enterprise Testing & QA Services

Performance shortcomings in software result in increased costs and customer dissatisfaction. Traditionally, less than 50% of application functionality undergoes unbiased functional, performance and integration testing before deployment.

Effective testing enables validation of all implementation and configuration decisions. eHealthPartners uses proven testing approaches that allow our customers to ensure that solutions and software perform as expected. Enterprise Testing and QA Services consists of 3 major areas: assessment and auditing, enterprise testing, and quality services. We help you develop these testing capabilities by implementing standardized testing processes and tools that help reduce testing time and costs. Our consultants emphasize knowledge transfer to ensure that your staff understands and effectively uses the processes and tools necessary to adequately test your systems now and in the future.
