Your organization's enterprise architecture should serve as a framework for decision-making that supports current and future business and IT needs. eHealthPartners provides software and technical solutions to transform and better align your information technologies with your business needs. Our seasoned architects deliver high performance, cost effective business and technology efficiencies while maintaining the integrity, reliability and security of your infrastructure.

Our Technical Consulting Services include:

Technical Assessments & Troubleshooting

Managing today's complex payer software applications and web technologies requires broad based technical knowledge and skills. eHealthPartners will assess your system architecture, applications and network to ensure systems perform as expected, integrate multiple platforms into a single entity and reduce complexities while maximizing performance.

Enterprise Architecture

Enterprise Architecture is the backbone of information technology. eHealthPartners consultants help your organization select and implement solutions that facilitate business growth, mitigate risks and lower Total Cost of Ownership (TCO). We help you:

- Develop a scalable, high-performance service-oriented architecture (SOA),
- Plan, size and acquire your hardware and network
- Implement leading enterprise application integration (EAI) products
- Assess and improve your information security and
- Assess and mitigate risks.

EDI and HIPAA Services

Your organization's EDI infrastructure and processing capabilities offer the potential to facilitate system integration and streamline communications with providers, members, employers, brokers and other business partners. Our EDI Services team helps you improve your claims throughput, decrease claims processing costs, improve partner satisfaction and achieve HIPAA compliance.

Data Conversion

Data conversion is a complex effort. Key considerations include:

- What data to convert
- How much data to convert
- The age of the data to be converted and
- How to achieve system cutover and claim run out

Special attention must be paid to alignment of configuration, data conversion and reporting strategies. eHealthPartners will help your organization develop a data conversion strategy, map data from the source system to the target system, and efficiently convert data to more quickly and efficiently deploy your applications.

Application/Web Development

eHealthPartners provides application and web development, maintenance, migration, re-engineering, and testing services. We develop, test and deploy robust technology solutions to optimize the business and infrastructure functionality of your systems, provide location transparency and help achieve the maximum possible return on your technology investment.

Our team will help your organization:

- Develop interfaces, extensions and extracts
- Develop custom applications
- Develop custom web applications
- Implement commercial web solutions and
- Mine data for decision support
